

JBoss AS7 - Listing Of All System Properties

 Versión 6

Creado por Rostislav Svoboda el 21-oct-2011 2:34. Modificado por última vez el 10-dic-2012 14:00 por Ondrej Zizka.

This article will talk about overview of all system properties in JBoss AS7+ including OS system properties and properties specified on command line using -D, -P or --properties arguments.

CLI

```
$ ./bin/jboss-cli.sh --connect controller=IP_ADDRESS
```

STANDALONE

```
[standalone@IP_ADDRESS:9999 /] /core-service=platform-mbean/type=runtime:read-attribute(na
```

DOMAIN-SERVER

```
[domain@IP_ADDRESS:9999 /] /host=master/server=server-one/core-service=platform-mbean/type:
```

DOMAIN-DC

```
[domain@IP_ADDRESS:9999 /] /host=master/core-service=platform-mbean/type=runtime:read-attr:
```

Writing a system property foo=bar:

```
/system-property=foo/:add(value=bar)
```

Web console

TBD, see [AS7-2172](#) -- Provide the ability to view OS system properties within the console.
